

XBRL US  
Management Presentation  
2018/2019 Plans

Campbell Pryde, President and CEO, XBRL US

November 8, 2018

# Agenda

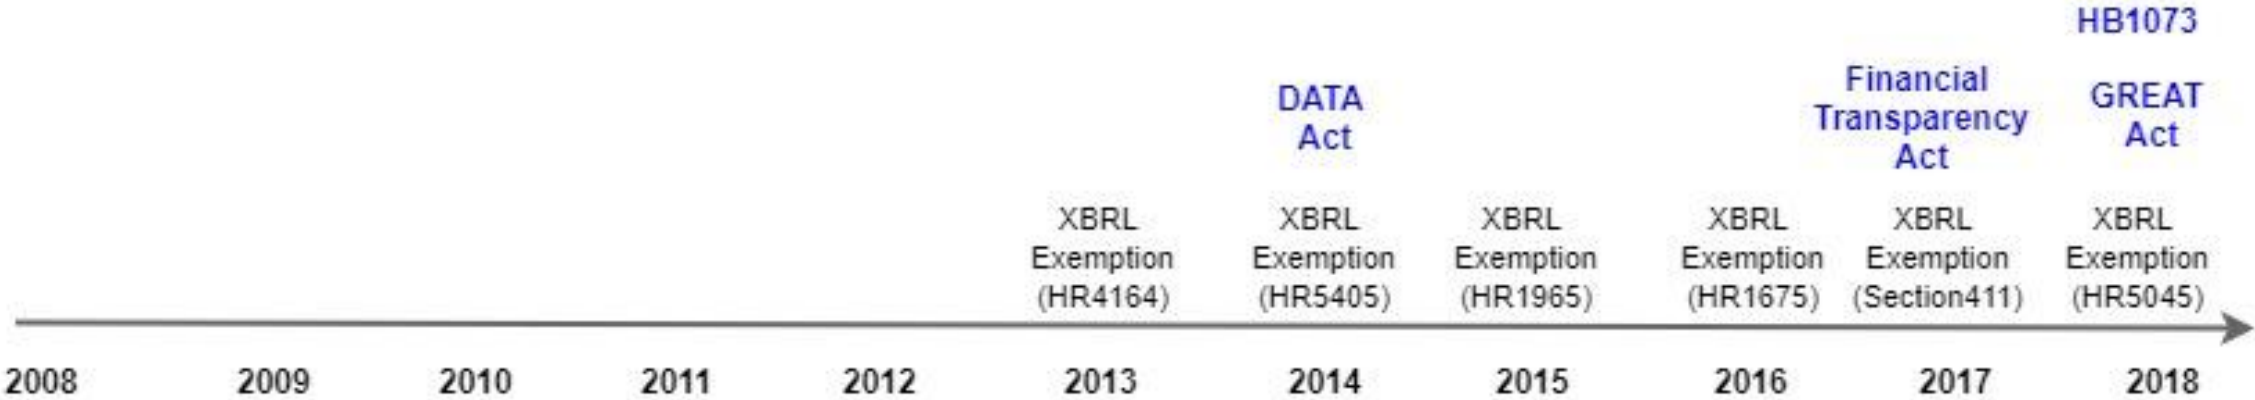

Management Presentation – Campbell Pryde	10:00 - 10:20
Elections – Mike Schlanger	10:20 – 10:25
Data Quality Committee – Lou Rohman	10:25 – 10:40
Domain Steering Committee – Scott Theis	10:40 – 10:55
Communications Steering Committee – Chase Bongirno	10:55 – 11:05
State & Local Government Working Group – Marc Joffe	11:05 – 11:20
Earnings Announcement Committee – Patrick Loughry	11:20 – 11:30
Discussion & Lunch	11:30 – 12:30

# Regulation

# Legislation

# Industry

# Growing focus on data standards

SEC Credit Rating Agency  
 SEC Mutual Funds Risk/Return  
 SEC Public Companies

SEC Proposals: Guaranteed Securities, Variable Annuities  
 Small Business Administration  
 SEC Inline XBRL Mutual Funds & Operating Companies  
 FERC Utilities  
 SEC IFRS Taxonomy

Dept of Energy Renewables

# XBRL US Strategy

- Make XBRL data better
- Make XBRL easier to use
- Expand the XBRL footprint

# Strategies and opportunities in 2019

## Data quality

- Increasing activity in DQC rulemaking and guidance, greater market participation, more rules usage by issuers
- Closer SEC, FASB and IASB engagement
- Inline XBRL
- Taxonomy development guidance and certification for successful standards programs, Regulatory Workshop

# Strategies and opportunities in 2019

## Expanding the footprint – more business opportunities

- Surety insurance
- Renewables
- Utilities
- State and local government financials
- Earnings announcements

# Strategies and opportunities in 2019

## Ease of use/increase usage

- Investment Company Advisory Board
- XBRL database
- XBRL Data Community and XBRL APIs

# Strategies and opportunities in 2019

## The XBRL API

### A standard for retrieving XBRL data

The XBRL API (Application Program Interface) is a set of endpoints developed to help data users access timely, highly granular, structured XBRL data. This standardized API allows developers and data utilities, with limited XBRL knowledge, to learn a single interface to access data from any database that contains XBRL data, including [XBRL US Database of Public Filings](#).

**What is the XBRL US database?** This database was created to demonstrate the kind of structured data that is available, and to give startup organizations an opportunity to test out using XBRL-formatted information.

Watch a replay of an [introductory webinar](#) about the XBRL API and XBRL Data Community

Data below is a sample preview - [login to return details from the latest 10-K inline XBRL filings](#) submitted to the SEC.

Report for company (CIK) plus filing detail & select reported facts	Accepted (ET)

# DQC Timeline

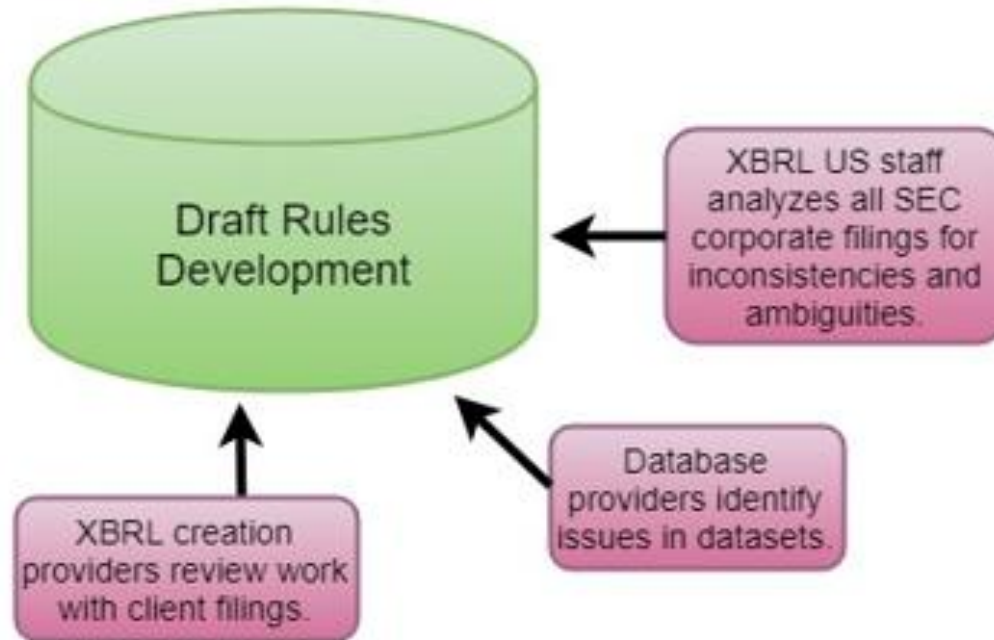

# Building Rules

## Steps in the DQC rules creation process

### 1. Gather input on errors in filings and create an initial draft of Rules

# Building Rules

## Steps in the DQC rules creation process

### 2. Consider potential problems with each Rule

- What is the impact of the error occurring?
- Does the error occur frequently among different filers?
- Can an unambiguous rule be established to flag that error?
- Could triggering the error result in a “false positive”?

# Building Rules

## Steps in the DQC rules creation process

**General rule message example**

Tax Credits has a value of -0.04 which is less than zero. This element should not have a negative value when the value for the element Net Income Loss Before Tax is greater than zero.

The properties of this us-gaap:EffectiveIncomeTaxRateReconciliationTaxCredits fact are:

Period: 2012-12-31  
Dimensions: none  
Unit: USD  
Rule version: 1.0

**3. Write clear, unambiguous error messages**

# Building Rules

## Steps in the DQC rules creation process

4. Test the rules against all public historical company filings

# Building Rules

## Steps in the DQC rules creation process

- 5. Conduct Public Review to gather more input from SEC filers, data consumers and other stakeholders**

# Building Rules

## Steps in the DQC rules creation process

### **6.** Incorporate market feedback gathered during Public Review

# Building Rules

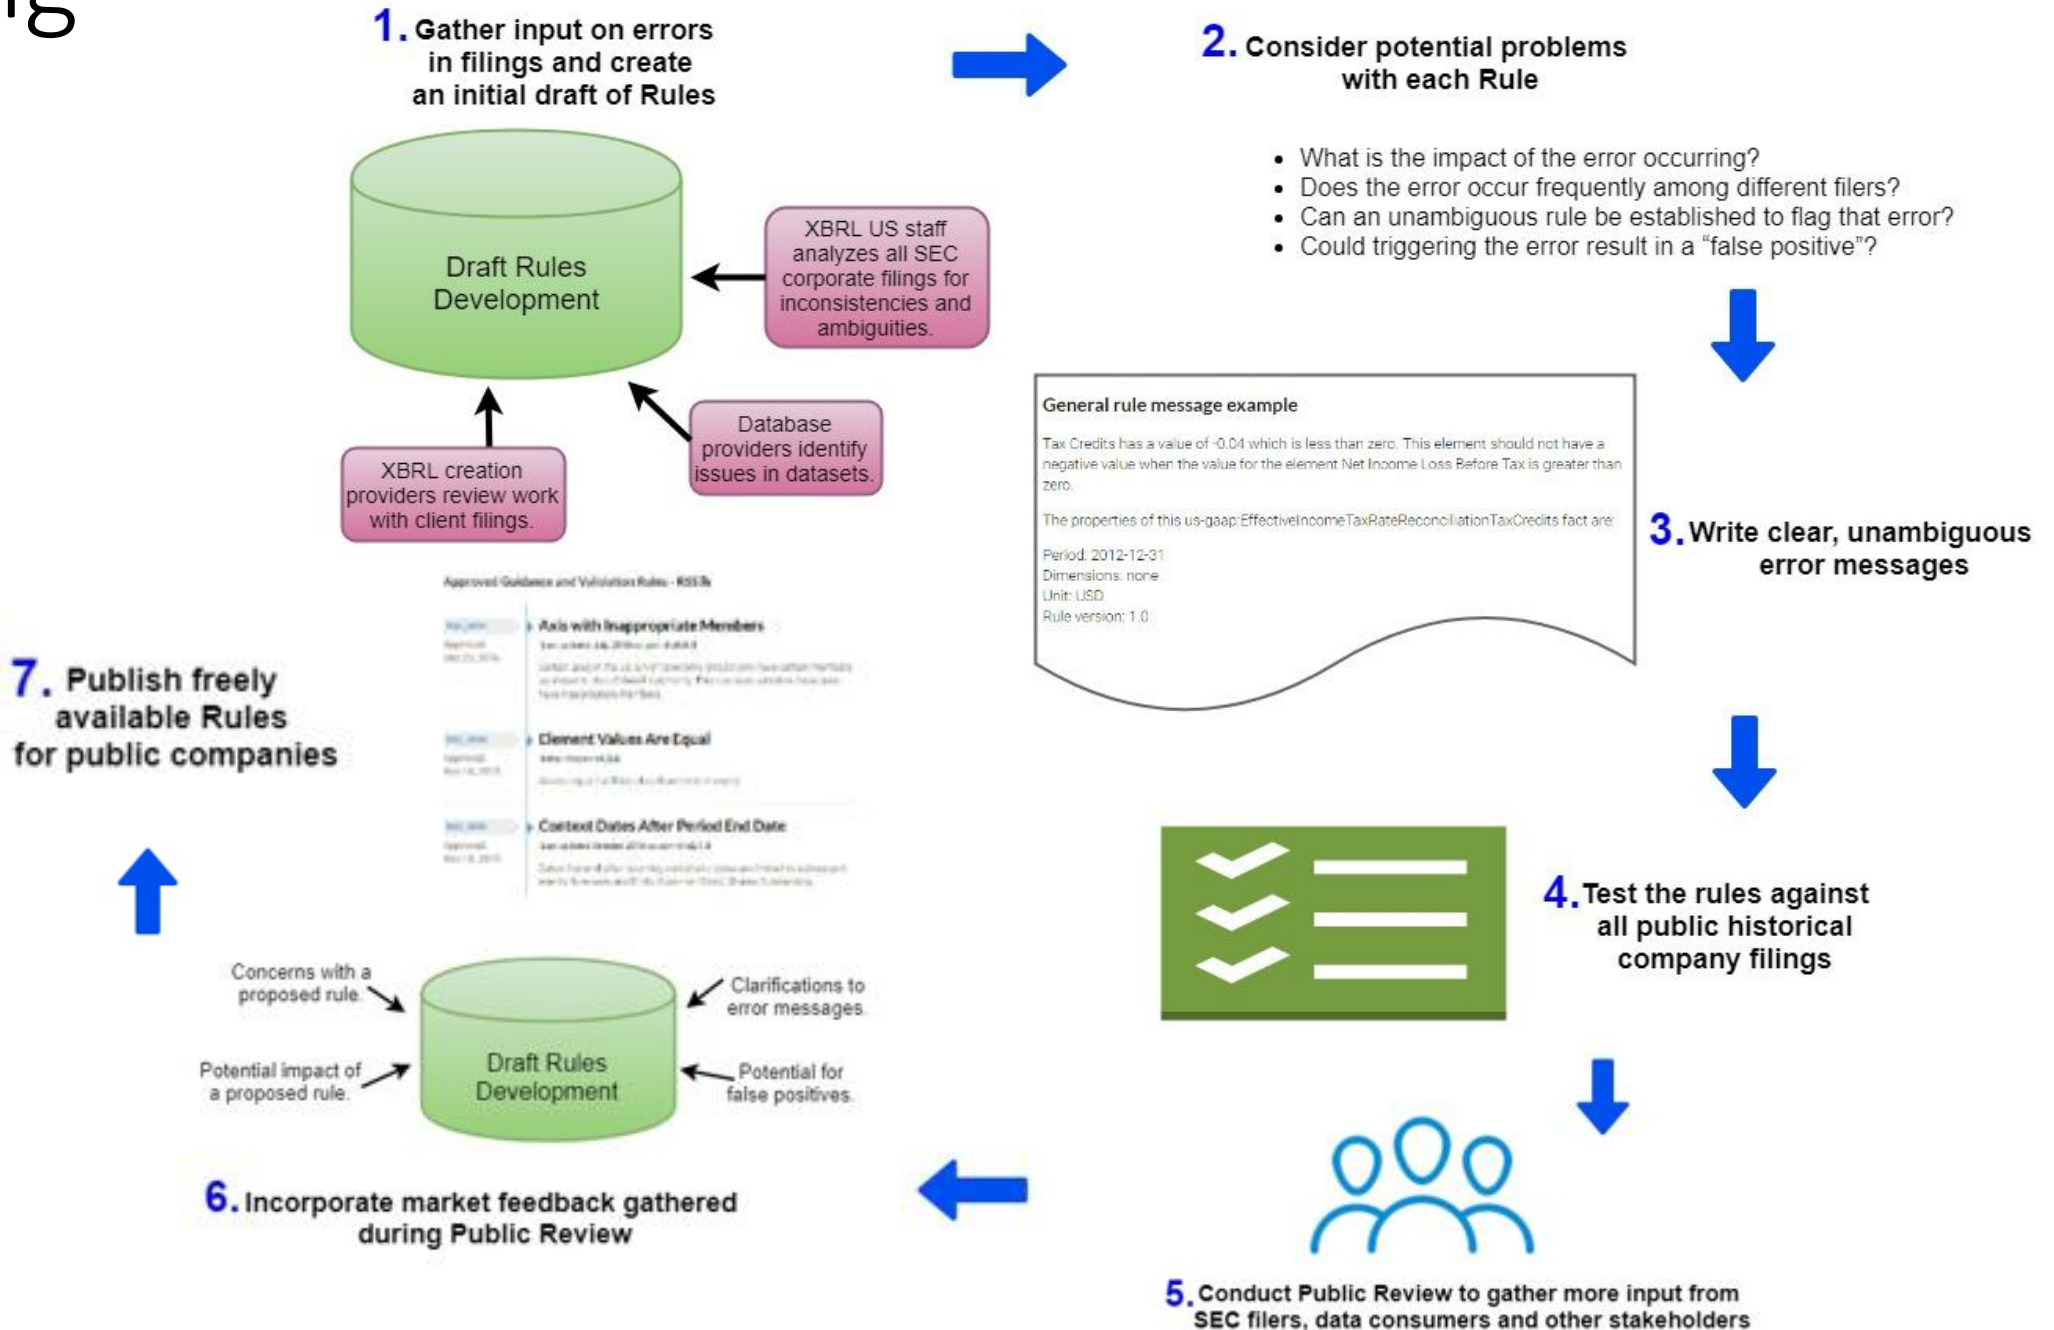

## Steps in the DQC rules creation process

### 7. Publish freely available Rules for public companies

Approved Oct 29, 2018	See article July 2018 version 4.6.8.3 DQSR and the US GAAP elements should only have parent members as shown in the DQSR taxonomy. This rule adds rules that will fix this problem in the taxonomy.
<b>RUC-2018</b> Approved Nov 18, 2018	<b>Element Values Are Equal</b> RUC-2018-0128 Ensuring all Element values are the same.
<b>RUC-2018</b> Approved Nov 18, 2018	<b>Context Dates After Period End Date</b> See article October 2018 version 4.6.8.3 Dates that are after the reported end date are listed in subsequent works, Securities and Equity Owner Data, Share Outstanding.

# Potential taxonomy builds (short-term)

## **Regulatory**

- State financial reporting (FLA state)  
- High
- Grants reporting (OMB) – High
- Utilities (FERC) – High
- Variable annuity disclosures (SEC)
- Guaranteed Securities (SEC)

## **Non-regulatory**

- Solar financing
- WIP - Small Business Administration
- Contractor financials (private companies)

# Building the Taxonomy Development Toolkit

- Challenge:
  - High potential demand from regulators and the market
  - Very few people have built taxonomies “from scratch”
  - Limited guidance available
- Objectives:
  - Provide education and training for those new to XBRL
    - Take the mystery and complexity out of taxonomy development
    - Encourage creation of new taxonomies
    - Get regulators engaged
  - Establish step by step processes and tools to make taxonomy building as easy as possible
  - Ensure good quality taxonomies, successful programs and good quality XBRL data

# Status

- Completed:
  - Established metrics framework for taxonomy structure and use
  - Established informal taxonomy approval process
  - Approved Surety WIP Taxonomy
  - XBRL US Style Guide
  - Resource Reference index on [www.xbrl.us](http://www.xbrl.us)
- Underway 2018/2019:
  - Earnings Announcement Research Subcommittee
  - Wikipedia Review and Update (moved to CSC)
  - Taxonomy Development Guide

# Taxonomy Development Guide

**Chapter 1 — Introduction** — A synopsis of the Taxonomy Development Guide and XBRL **DRAFT**

**DRAFT**

**Chapter 2 — What is XBRL** — This section provides an overview of XBRL, principals and conventions. Within this introduction, below, is a general discussion of how XBRL is different than other exchange standards such as basic XML, JSON or CSV.

**Chapter 3 — Assessing Your Project** — This section is a general discussion with regard to organizing data in a meaningful manner for the creation of the semantic data model and eventual taxonomy.

**Chapter 4 — Building a Taxonomy** — How to on the mechanics of building your taxonomy **DRAFT**

**DRAFT**

**Chapter 5 — Taxonomy Development Tools** — Building a taxonomy with Excel/Google Sheets and Arelle.

**Chapter 6 — Documenting a Taxonomy** — A discussion of how to document your taxonomy for use by preparers, developers and information consumers.

**Chapter 7 — Taxonomy Governance** — Tips and direction on implementation of a taxonomy and on **COMPLETE** finance.

**Appendix A — Taxonomy Creation Checklist** — A basic checklist of 'to do' items for creating a taxonomy.

**DRAFT**

**Appendix B — XBRL US Taxonomy Approval Outline** — Information as to how a taxonomy can be reviewed and approved by XBRL US.

**DRAFT**

**Appendix C — Project White Paper Outline** — Information to aid in the creation of project 'white paper' to aid in the process of developing a taxonomy.

**Appendix D — Taxonomy Guide Outline** — An outline for a consolidated Taxonomy Guide to be used by users of a taxonomy including preparers, consumers and software developers.

**Appendix E — Preparer's Guide Outline** — An outline for a preparer guide to creating information using the developed taxonomy.

# Taxonomy development materials to be used at: Regulator Workshop Washington, DC, early 2019

- Objectives:
  - Educate regulators on how open data standards have been successfully deployed in regulatory environments to reduce costs, improve accuracy and speed of reporting through greater efficiency
  - Provide the building blocks to creating good quality XBRL taxonomies that result in good quality standards programs
- Topics:
  - Case studies
  - Basics of XBRL
  - Steps to building a taxonomy
  - Materials available to use (toolkit)
  - Open source (free) tools available

# DSC Members (Thanks for your support!)

# XBRL US Communications Steering Committee

Chase Bongirno  
Toppan Vintage

November 8, 2018

# Mission of the Committee

To facilitate the adoption and widespread use of XBRL by the business reporting supply chain, the CSC engages members, government and the public at large to increase the awareness of the benefits of using XBRL data and build community among a diverse audience.

# Project: Regulatory and legislative monitoring and response

- Regulatory

- Monitor regulatory activities where input may be solicited
- Recent and upcoming projects:
  - SEC Request for Comment on Fund Retail investor Summary
  - IFRS Taxonomy Public Review
  - SEC Proposal on Disclosures about Guaranteed Securities
- Aid in preparing responses

- Legislative

- Monitor congressional activities, GREAT Act, XBRL exemption, HB 1073
- Brainstorm approach to engagement

# Project: Issuer Education

- Monitor issuer sentiment towards XBRL
- Educate SEC filers on how they benefit:
  - Determine messaging/creative strategy
  - Develop outreach program, e.g., webinar series, papers from XBRL US Investor Advisory Committee (new program), media program, potentially XBRL US member “ambassador” program

# Project: Academic Education & Engagement

- Developing content for faculty to use in student instruction which helps educate students on the use of XBRL for analysis
- Member-alumni communications - about financial data standard and why our school/department should consider getting involved as members

# Project: Update XBRL Wikipedia

## XBRL

From Wikipedia, the free encyclopedia

**XBRL** (**eXtensible Business Reporting Language**) is a freely available and global framework for exchanging business information. XBRL allows the expression of *semantic meaning* commonly required in *business reporting*. The language is *XML*-based and uses the XML syntax and related *XML* technologies such as *XML Schema*, *XLink*, *XPath*, and *Namespaces*. One use of XBRL is to define and exchange financial information, such as a financial statement. The XBRL Specification is developed and published by *XBRL International*, Inc. (XII).

XBRL is a standards-based way to communicate and exchange business information between business systems. These communications are defined by *metadata* set out in *taxonomies*, which capture the definition of individual *reporting* concepts as well as the relationships between concepts and other *semantic* meaning. Information being communicated or exchanged is provided within an *XBRL instance*.

Early users of XBRL included regulators such as the U.S. *Federal Deposit Insurance Corporation*<sup>[2]</sup> and the *Committee of European Banking Supervisors* (CEBS).<sup>[3]</sup> Common functions in many countries that make use of XBRL include regulators of stock exchanges and securities, banking regulators, business registrars, revenue reporting and tax-filing agencies, and national statistical agencies.

A wiki repository of XBRL projects is available to be freely explored and updated.<sup>[4]</sup> Within the last ten years, the *Securities and Exchange Commission* (SEC) in the United States, the United Kingdom's *HM Revenue and Customs* (HMRC), and *Companies House*, *Singapore* had begun to require companies to use it, and other regulators were following suit.<sup>[5]</sup> Development of the SEC's initial *US GAAP* Taxonomy was led by *XBRL US* and was accepted and deployed for use by public companies in 2008 in phases, with the largest filers going first: foreign companies which use *International Financial Reporting Standards* (IFRS) are expected to submit their financial returns to the SEC using XBRL once the IFRS taxonomy has been accepted by the SEC. In the UK in 2011, both HMRC and Companies House accepted XBRL in the *iXBRL* format. XBRL was adopted by the *Ministry of Corporate Affairs* (MCA) of India for filing financial and costing information with the Central Government.<sup>[6]</sup>

# XBRL US

## State & Local Government Disclosure Modernization Working Group

Marc Joffe

Senior Policy Analyst, Reason Foundation  
Chair, SLG Working Group

November 8, 2018

# Mission of the Committee

- This working group seeks to address problems in municipal financial reporting by designing schemas and XBRL implementation(s) for open data reporting of state and local government actual financial results.
- The scope of work includes Comprehensive Annual Financial Reports (CAFRs), Single Audit packages, state-mandated Annual Financial Reports (AFRs), and responses to relevant Census Bureau financial surveys.
- Our work is intended to benefit of US state and local governments, as well as public pension systems.
- There are over 90,000 local governments in the US. About one third of these produce audited financial statements.

# The Investor Challenge

- Academic research shows that several financial ratios are statistically significant predictors of financial distress events such as municipal bond defaults and municipal bankruptcies ([Gorina, Joffe & Maher, 2018](#))
- But data needed to calculate these ratios is not widely available - in sharp contrast to US corporate securities
- If CAFRs were available in XBRL form, market data providers like Intrinio could provide key ratios to investors and analysts at low cost
- This would free investors from dependence of traditional credit ratings which are:
  - Not available for many municipal securities
  - Inconsistent across rating agencies
  - Subject to criticism from academics and certain industry observers

# The Public Policy Problem

- Tens of thousands of governments publish audited financial statements each year, but their data is locked in PDFs (electronic paper), so they're hard to analyze and summarize
- Questions: What is the nationwide total of unfunded state and local OPEB obligations? Which governments have the worst OPEB problem (i.e. highest unfunded OPEB as a % of revenue or per capita)
- Answer: No one really knows because the source data is trapped in PDF financial statement footnotes.

**City of St. Petersburg, Florida**  
*Notes to the Financial Statements*  
*September 30, 2017*

**NOTE 20 – OTHER POST-EMPLOYMENT BENEFITS - (Continued)**

Funding Policy  
All of the above benefit plans are provided through insurance companies or health maintenance organizations (HMO). Some health plan premiums are based on the benefits paid during the plan period ending March 31. The City recognizes the cost of providing benefits by expensing monthly premiums, on a pay-as-you-go basis. There are no plans at this time to fund the OPEB liability and therefore there are no plan assets. For the fiscal year ended September 30, 2017, the cost of retiree health care for 1,120 participants was \$13,241,865 of which \$4,811,974 was paid by the retirees. The City offers vision, dental and AD&D policies paid for entirely by active and retired employees.

Annual OPEB Cost and OPEB Obligation  
The City received the current year results of an actuarial valuation report for retiree health benefits as of October 1, 2016 for fiscal year 2017. The valuation was completed under the requirements of GASB Statement 45. The development of the Net OPEB Obligation is listed below for the fiscal year ended September 30:

Funded Status and Funding Progress  
As of September 30, 2017, the actuarial accrued liability for benefits was \$199,781,000, all of which was unfunded. The covered payroll (annual payroll of active employees covered by the Plan) was \$143,194,193 and the ratio of unfunded actuarial accrued liability (UAAL) to covered payroll is 139.5%.

# The Vision

- Provide a database of **standardized** government financial statistics based on **audited** financial reports available at **low cost**
- This would:
  - Reduce the cost of rating state and local governments, conducting state oversight and producing public policy research
  - Provide **real** transparency: making it easier for citizens to learn about local government pension, OPEB and bond liabilities
- By migrating documents from paper-like PDFs to a newer “machine readable” format, we greatly lower the cost of building and maintaining a public fiscal database

# Migration from “paper” filing to E-filing: A trend bypassing government *until now*

- Over 90% of individual taxpayers file electronically (no longer using paper 1040s).
- Financial data standards (XBRL) have not been applied to US state and local financial audits. So, state and local government reporting technology has fallen behind individual and corporate reporting
- Spain and Brazil have already implemented XBRL municipal taxonomies, but the nation with the deepest municipal bond market hasn't
- [Florida HB 1073 \(2018\)](#) moves local government disclosure into the 21<sup>st</sup> century by authorizing and funding a transition to XBRL.

# Local Government Financial Reporting: Many Consumers, Multiple Formats

- Different information consumers have varying and overlapping data requirements
- Local governments often produce three types of annual financial reports:
  1. CAFR
  2. State AFR
  3. Census Response
- Some financial elements may be antiquated and only collected due to bureaucratic inertia

# Many states use some form of digital financial reporting for their local governments, but...

- These Excel-based solutions do not replace CAFRs
- As a result, many local governments have to file **both** a CAFR and an Excel-based state AFR, **as well as** a Census response
- Florida HB 1073 authorizes replacement of state AFRs with CAFR-based XBRL filings
- Inline XBRL will make this possible

# Inline XBRL for CAFRs

- Prototype taxonomy and instance document for City of St. Petersburg, Florida developed with support of Mercatus Center and contributed to the working group
- Available on XBRL US Github page

**NOTE 20 – OTHER POST-EMPLOYMENT BENEFITS - (Continued)**

Funding Policy

All of the above benefit plans are provided through insurance companies or health maintenance organizations (HMO). The cost of providing benefits during the plan period ending March 31. The City recognizes the cost of providing benefits by expensing the cost of providing benefits during the plan period ending March 31. There are no plans at this time to fund the OPEB liability and therefore there are no plan assets. For the fiscal year ending September 30, 2017, the cost of retiree health care for 1,120 participants was \$13,241,865 of which \$4,811,974 was paid by the retirees. The City offers vision, dental and life insurance to active and retired employees.

Annual OPEB Cost and OPEB Obligation

The City received the current year results of an actuarial valuation report for retiree health benefits as of **October 1, 2016** completed under the requirements of GASB Statement 45. The development of the Net OPEB Obligation is listed below for the

	2017	2016	2015
Annual Required Contribution	\$ 15,664,000	\$ 16,447,000	\$ 13,555,000
Interest on the Net OPEB Obligation	3,255,002	2,805,000	2,438,000
Adjustment on the ARC	(4,440,000)	(3,603,000)	(2,812,000)
Annual OPEB Costs	<b>14,479,002</b>	15,649,000	13,181,000
Less: Contributions made	(6,050,000)	(5,643,000)	(5,041,000)
Increase in Net OPEB Obligation	8,429,002	10,006,000	8,140,000
Net OPEB Obligation – beginning of year	72,330,000	62,324,000	54,184,000
Net OPEB Obligation – end of year	\$ 80,759,002	\$ 72,330,000	\$ 62,324,000

Percentage of Annual OPEB Cost Contributed and Net OPEB Obligation

Fiscal Year	Annual OPEB Cost	Contribution	Percentage of Annual OPEB Cost Contributed	Net OPEB Obligation
9/30/17	14,479,000	<b>6,050,000</b>	42%	80,759,000
9/30/16	15,649,000	5,643,000	36%	72,330,000
9/30/15	13,181,000	5,041,000	38%	62,324,000
9/30/14	12,923,000	7,085,000	55%	54,184,000
9/30/13	13,868,000	6,253,000	45%	48,346,000
9/30/12	13,503,000	6,274,000	47%	40,731,000
9/30/11	13,247,000	5,471,000	41%	33,502,000
9/30/10	12,525,000	6,187,000	49%	25,726,000

Funded Status and Funding Progress

As of September 30, 2017, the actuarial accrued liability for benefits was \$199,781,000, all of which was unfunded. The covered payroll (annual payroll of active employees covered by the Plan) was \$143,194,193 and the ratio of unfunded actuarial accrued liability (UAAL) to covered payroll is 139.5%.

# Third-Party Enhancement of SEC Viewer

Idacti's enhanced inline XBRL viewer allows users to see time-series charts within the browser: this functionality works well with 10-year tables in a CAFR's Statistical Section.

# XBRL CAFR Legislation...

## Benefits

- Provides greater local government financial transparency
- Can ultimately lower costs for local governments by consolidating multiple filings into one

## Pending at the Federal Level

- The GREAT Act (H.R. 4887, S. 3484) – Grant Reporting
- The Financial Transparency Act (H.R. 1530)
- May not be needed if MSRB or OMB implement using existing authority

## State Level (while we wait)

- ALEC's model [Open Financial Statement Act](#)
- Working group members are advocating legislation along these lines in multiple states

# XBRL US Earnings Subcommittee

Patrick Loughry

November 8, 2018

## Mission

To investigate possible XBRL tagging of corporate earnings announcements, given the timeliness and market-moving nature of the data provided in earnings announcements, and demand expressed by the investment community.

# Scope and Activities

- Research options on both news release and Form 8-Ks as corporate earnings announcements, as well as demand for tagged earnings announcements among the investment community
- Develop a white paper
- Based on findings, consider proposing an SEC requirement that public companies prepare their Form 8-K earnings announcements in XBRL format

# Issuer concerns from survey

- Investors do not use XBRL data.
- Time constraints on earnings day.
- Incomparable data.
- Different departments handle the press release versus the form 8-K.
- Earnings releases may contains graphics.
- The 10-Q/10-K already contains tagged data that would be in the release.

# Issuer feedback from survey

- Most stated that investors would be only mildly interested in tagged data in the earnings announcement.
- Regulators would only be slightly more interested in tagged earnings announcements.

# Investment company feedback

- Buy-side:

*“Have 5-6 companies reporting at once have to get models updated quickly.”*

- Sell-side:

*“... process today is very manual. PDF or Form 8-K comes out, associate opens up the model and types data in cell by cell. XBRL would take the manual processing out and help with accuracy. If it was structured, this could be performed more easily. A retail earnings release for example, may take 20 minutes, but a financial institution release could have 40 pages of supplemental information...”*

# Next steps

- Continue research among investment community
- Earnings release analysis
- Develop white paper

# Discussion

# Topics

- What are the most important benefits to members/where should XBRL US staff focus our efforts?
- What are the most important activities that XBRL US and XII should be working on over the next 12 months? Over the next 3-5 years?
- Are you more or less optimistic about the prospects for XBRL this year versus last year?
- Where is XBRL going? (technologically, reporting domain, public versus private sector?)
- What concerns are you hearing about XBRL from clients, colleagues, etc.?
- What other strategy ideas do you have for XBRL US and XII to support reporting standardization and our members? What should XBRL US be doing in addition to the strategy laid out earlier? Or are there key areas that we should change?
